

MUHAMMAD FAISAL ASHSHIDIQ

Frontend Developer

Jl Sariwangi Selatan West Bandung, Indonesia | sidiqfaisal30@gmail.com | 6285771089755

PROFILE

Frontend Developers with a career interest in technology, especially in developing web applications, building interactive, responsive, and experience-oriented web interfaces from an individual project. He is a quick learner, adaptable, used to understanding situations based on user needs and translating designs into functional web appearances. Focus on neat, structured, consistent code, paying attention to the performance of each page, accessibility and providing a pleasant experience for users.

PROJECTS

Tracker-io

Dicoding – Front-End Web Developer Learning

- Build basic web applications using HTML, CSS and JavaScript as per the Dicoding Front-End Web Developer curriculum.
- Implement a DOM structure dynamically manipulating elements to display and manage data.
- Apply the basic principles of responsive design and clean code in web interface development.

Form Signup dan Signin

Individual projects – Fundamental learning

- Build Register and Login forms using HTML, CSS, and JavaScript complete with client-side input validation.
- Implement basic authentication logic (Blank input checking, email formatting, password match) before data is processed.
- Design the user flow from the account registration process to successfully logging into the app.

Websocket

Individual projects – Real-time app development

- Build a real-time chat app using the websocket API, connected to the Go backend deployed in Google Cloud Run.
- Implement dynamic connection, real-time message sending and receiving features and connection status indicators.
- Implement input sanitization to prevent xss on message views.
- Use jQuery and tailwindCSS to develop a responsive and interactive interface.

GIS (Geographic Information System)

Individual projects – Application development defines coordinate points.

- Build interactive mapping and location tagging applications and calculate distances or routes between points on maps.
- Dynamically integrate geographic data into map views.
- Designing an interface that makes it easy for users to interact with the map.
